Github link:

https://github.com/BigBoyGlenn/Compulsory_3.git

This compulsory was really challenging for me. I used most of the time trying to comprehend the logic behind pointers, I simply didn't get it.

Depending on what code is on the github link.

The first code is something I got help with from a classmate to write. It's a program that makes folders and files, then prints them out.

The second code is what I am working on but ran out of time. This code should have all the requirements for the compulsory. I just need a few more days to write and understand pointers.

I have not had time to make the UML for this compulsory.
